Antifreeze Permanent

Description Antifreeze Permanent is a high performance engine coolant which exceeds the requirements of British Standard Specification BS 6580.

It is a mono ethylene glycol based product which has been specifically formulated to be truly universal in its application, providing a high degree of corrosion protection for all engine cooling systems whether they be predominantly aluminium or ferrous construction.

The coolant has been designed for all year round use to provide " three way protection " against freezing, overheating and corrosion and is suitable for use in both petrol and diesel engines.

Application Antifreeze Permanent provides excellent protection against damage caused by frost. (50% gives a -36°C protection , 25 % gives a -13°C protection)

A 50% solution raises the boiling point to 108°C and reduces the risk of boiling over.

Corrosion protection is the most important function. A well balanced inhibitor package gives a maximum protection against corrosion.

Normally a 50% solution (1:1) is recommended for an excellent protection against frost, overheating and corrosion.

Specifications

- BS 6580
- ASTM D3306
- SAE J1034
- AFNOR NF R 15-601

Typical analysis :

Density at 15°C	1.130
Ethylene glycol / % min.	94
Colour	yellow
pH 50% vol	7.5
Pour point °C (50% water)	-36
